

Target Audience: Internists, Infectious Disease Specialists, Infection Prevention Professionals, Nurses, Long Term Care HCW and Allied Health Professionals involved in the care and treatment of patients.

OBJECTIVES:

Upon completion of this symposium you will be able to:

1. Describe differences between post-acute and long-term care (PAC/LTC).
2. List the gaps in Infection Prevention and the opportunities to promote Infection Prevention in PAC/LTC.
3. Describe the national initiatives driving PAC/LTC surveillance and stewardship efforts.
4. Describe the epidemiology and risk factors for Legionellosis.
5. Explain environmental issues and assessment- What, where, when and how to sample?
6. Recognize the importance of a multidisciplinary approach.
7. Discuss at least two new changes related to reprocessing critical or semicritical patient care instruments and devices.
8. Identify new practices to reduce environmental contamination and reduce healthcare-associated infections.
9. Discuss new recommendations, practices, and technologies associated with disinfection and sterilization in healthcare facilities.
10. Recognize how next-generation DNA sequencing can be used to solve outbreaks of infectious disease in settings including hospitals.
11. Describe real-world case studies where genomics has been used in infection control.
12. Identify what the next steps are for infectious disease genomics in the hospital setting.
13. Identify the contribution of infection prevention in value-based purchasing.
14. Describe the relationship between infection prevention and hospital-acquired conditions (HAC).
15. Enumerate the three mechanisms to leverage for patient safety.
